

To: FCC

Please to not cave in to the National Association of Broadcaster's efforts to limit the type and kind of services and information that XM Radio provides to it's customers. There are two reasons that I make this request (1) if we are truly a free market economy and a free country then it would seem that the 'best provider' should win the market based on their service and content not on how much money they have for lawyers, and (2) many of us are tired of monopoly that corporations like Clear Channel Corporation have and want an alternative of better content and better service.
